H. M. McLEOD HYBRIDIZING IRIS

**WE RESPECTFULLY DEDICATE THIS 1959 EDITION
TO THE MEMORY OF A DEVOTED LOVER AND
HYBRIDIZER OF IRISES.**

(H. M. McLeod passed away in FEBRUARY, 1959)

Our first opportunity to show these lovely medals. We receive them with humble gratitude, and include them in the catalog that they may become part of our documented history.

THE SEARCH

By LOLETA KENAN POWELL
Princeton, N. C.

The Angel of the Artists said,
"Go, seek the fount of pigment.
Find it shaded, pure, and bright;
Be certain it's not mere figment."

The artists took to wood and field;
They searched the sky and seas.
They were aghast at all they saw;
But not the fount were these.

The earth one day was shrouded o'er
With clouds, full, ominous with rain.
The torrents fell — LO. The earth, washed clean,
Was wreathed with a rainbow, colored again!

The artists gasped (for it was spring);
For looking from rainbow toward the ground,
They saw the fount of color spilled
In rain-pearled iris blooming 'round!

"This is our goal! This is the fount
Of color sought! In every bloom
There's iridescent pigment, delightful to the eye!"
"Yes," smiled the angel. "The Iris world's one
Glowing colored room!"

PILLS

By WALKER FERGUSON
Escondido, Calif.

Life now-a-days is full of pills
To cure our real or fancied ills.
A pill for this, a pill for that —
There's one for thin and one for fat.

The first thing, if you have a chill,
Is hurry up to take a pill.
Or if you have a fevered brow
You really need a pill right now!

I simply fail to understand
How any doctor in the land
Can, more or less, make up his mind
Just what you need, or nurses find.

The one and only latest thing
(The're popping up like weeds in Spring),
We need some huge 'lectronic brain
That we can sit down and explain
Our symptoms and our troubles to
And get the answer when we're through.

Then doctors will be obsolete —
Oh! Happy day — won't life be sweet?"

DEAR FANCIER FRIENDS,

Although belated let us wish each and every one of our iris and hemerocallis friends and customers a HAPPY NEW YEAR. Judging engagements for roller shows in the United States and Canada took me away from home during the winter so we were unable to send our annual greetings conveying good wishes and appreciation of all our loved ones and friends. Because of our silence, many friends expressed concern, fearing for our well-being or felt that we might have "tired" of their friendship and had "dropped them" from our "list." Hence our explanation, apology and untimely greetings. With this, however, we hope "things are back to normal!" Are we forgiven? Good!

This year looks most exciting to us. We have, what we believe, the finest array of introductions ever to grace the pages of any one catalog of our past experience. I shall quickly touch on these, later, but another thing that makes us feel good is that the John S. Fuller, Jr., family of Idaho Falls, Idaho will be with us and this should take many of the responsibilities from "Uncle Tell" and insure smooth-running of the "farm" and facilitate things during the busy shipping season. John and his sweet wife DaNae have four lovely little daughters. Perhaps next year if they stay with us, we shall have a picture of the happy group to show you. But we hope they will enjoy being here.

Now to tell you something about the hybridizers and the fine iris they have given us to introduce that they might bring joy to iris lovers the world over.

My friend Charles Salzer of Bakersfield, California was not an iris grower as our friendship began some twenty years ago when we were, then, both interested in the hobby of breeding and perfecting Roller Canaries. Charlie became one of the leading breeders of Rollers in this country winning numerous Championships with his outstanding birds. He also became a judge of Roller Canary Song and judged birds throughout the United States, Cuba and Canada. It was my pleasure twelve years ago to accompany Charlie and Mildred Salzer to Vancouver, B. C., Canada to judge a show where over 400 rollers were assembled for our appraisal and believe me it was no small task. Charlie and Mildred were then interested in other garden subjects and had a very fine collection of modern Gladiolus. I gave them a few "Standard" varieties of iris and a couple of "sick" rhizomes to save since their growing conditions were ideal. Actually iris grew in Bakersfield the year around with very little dormancy and no fear of winter-rot (*Botrytis*) ever plagued the area. So well did the iris thrive for the Salzers that Charlie offered to grow some rare things including newly selected seedlings. After this the Salzers saved many iris for me and multiplied my stocks of scarce items. Charlie started to hybridize very selectively, but his home garden was a very small area and his time pretty well taken up with responsibilities that were his in the office of Kern County Supervisor so he turned over the growing of most of his seedlings to another expert, Mrs. Neva Sexton, of whom I shall have occasion to write immediately hereafter. In 1955, I went to the California A.I.S. convention but went a day early to see the Salzers and their garden and subsequently the Sexton, Jim Gibson, Collie Terrell and Bill Schortman gardens all of which approached perfection in growth and bloom. The one day spent with these fanciers, and their gardens, left me more than a little bewildered, but I knew then great things were being accomplished by these growers. Blooming the first time for Charlie, in the Sexton garden, was a *plicata* with an unusual pedigree and at last I am able to list and introduce this fine creation named for the resort area where the Salzers have been engaged in business. We feel LAKE ISABELLA holds unlimited promise both as a garden subject and a great potential breeder for *plicatas* and many other colors. Actually it is the first introduction I have seen from the difficult parent PINAFORE LASS. We are happy Charlie decided to hybridize so that we might have this fine iris in our gardens. Perhaps there will be others, too, for I have a deep Pink Enchantment seedling of his here and Mrs. Sexton is keeping watch over several others until the time the Salzers have settled to a spot where they may once again garden and hybridize.

Although I only met Neva Sexton the once in her Wasco, California home garden I knew that here was a woman of keen ability and determination to become a good and sincere hybridizer of irises. I did not at this time see the iris I am introducing this year, and not until 1957 did she send me this plant under number N O 6, together with its pedigree, and ask me to give it a trial. When I saw the pedigree Neva had written on the tag (Golden Ruffles x Azure Skies) I said to myself: "Here is one I'm just wasting my time growing for I have never seen a really superb thing produced from a yellow and a blue crossed." But I was wrong—oh, so wrong. When N O 6 opened its first bloom I knew Neva had a real winner here for it had inherited the best qualities of its two parents. The very fine flower is perfection itself with the heaviest kind of substance and the health and vigor of its growth leaves little to be desired. We have known that Golden Ruffles is a little tender in some areas, but with the happy combination of Azure Skies blood a seedling was born with most of the desired qualities every hybridizer hopes for when making a cross. Because of the subtle mixture of colors in this flower the name MIXED EMOTIONS was decided upon. I feel all lovers of quality will enjoy it. Because of the touch of Chartreuse in the flower it may hold possibilities in further Green

breeding, and toward this goal did I hybridize with it last year, and although I tried several combinations only Mr. Jonas' OLIVETTE crossed on MIXED EMOTIONS. But I believe good blues and whites will come from Mrs. Sexton's fine creation. Happily I have on trial a sister seedling and some other hybrids of Neva's late work. I am most pleased to be privileged to introduce Mrs. Sexton's great iris.

Jim Gibson is a man now well known to the iris world for whom I have introduced NOMOHR and TAHOLAH. This year I am introducing Jim's first introduction out of NOMOHR crossed by pollen of CAPITOLA. I have watched this three years and its performance has always impressed me with fine growth and abundance of bloom. This iris has been named MOHR FUN and I'm sure hybridizers realize its great potential as a breeder since it is twice bred from its great progenitor I. Gatesii. I envision wonderful things to come from this when crossed with some of the new C. G. White hybrids that undoubtedly also descended from Gatesii blood.

This year there will be four other ARIL hybrids—two from the late H. M. McLeod, one from Walt Luihn, and Marbled Mohr of my own.

Aril breeders lost a worthy hybridizer and good friend when H. M. McLeod passed away, but his work remains a monument to his honored name and we are pleased his widow, Aileen, has released two of his hybrids for 1959 introduction; one has been named in his honor and memory and bears the name H. M. McLEOD the other Mr. McLeod named MISS MARTHA for his daughter. As you will note both of Mr. McLeod's new iris are derived from Regelia blood and should, therefore, be fertile. However, H. M. McLEOD does not produce pollen and will have to be used as a pod parent. There is a lot of green in this hybrid and if it can be induced to produce seeds with new things in this color range some greens could make an appearance with a fresh, clean look. Miss Martha, on the other hand, could be most useful in a plicata breeding program. Both of these hybrids should be used to advantage with the fertile C. G. White Hybrids.

For two years Mrs. Agnes Marriott's light blue with a blue beard has pleased fanciers visiting the Hamblen garden and now we are to introduce this lovely iris. The name MARIOTT was decided upon after conversation brought out the fact that Melba Hamblen was born in a Utah town bearing this name—a town, perhaps, named for one of the ancestors of Mr. Marriott. We thought it quite fitting to be named both for the family name and the town where Melba was born since she was responsible for its being introduced, really. Agnes Marriott told us the story of how she thought of this cross and felt something good should result; it was her first and only cross. This seedling pleased her and she asked Mrs. Hamblen to grow a rhizome and we are glad she did—otherwise another fine flower might never have been introduced. Undoubtedly there are hybridizers of iris and other flowers having success but "hiding their light under a bushel." Having had this initial success we hope Agnes Marriott will continue to hybridize.

C. J. Paul of Salt Lake City has been primarily interested in William Mohr and its seedlings. I have introduced his Altamohr and Gray Mohr and this year I am pleased to offer the gorgeous SINA MARIE (Named for Mrs. Paul) which bloomed so beautifully in the Fisher Harris garden in 1954 after the A.I.S. convention here. Mr. Paul tells me this is the result of a cross I suggested might be good in one of my catalogs. While SINA MARIE has plentiful pollen we cannot say for a certainty if it is very fertile. It is not easily podded; however, with some of the very fertile C. G. White Hybrids it may be induced to pod. Those who like Elmohr will be pleased with this iris for it is a larger, heavier substantiated, richer color than its illustrious pod parent with a heavy "ram-rod" stalk. Mr. Paul is growing various Oncocyclus and persisting with these difficult parents, and his son Lloyd has embryo-cultured quite a number of seeds for his father.

Mr. and Mrs. Walt Luihn of Hayward, California are both iris fanciers, but Walt takes "blame" for the hybridizing. They have one of the finest collections of Aril hybrids in the United States and grand seedlings from these. On our way home from the A.I.S. Convention in 1955 the Hamblens and I saw the Luihn seedlings and the first blooming of the lovely hybrid I am introducing this year as MOHRNING HAZE. Discriminating fanciers have urged the introduction of this fine iris and have anxiously awaited the day of its formal debut.

A neighbor of the Luihns, a close friend and co-partner in growing seedlings and fine new introductions is Larry Gaulter whose wonderful MADEMOISELLE comes to these pages this year. I first met Frances and Larry Gaulter when they stopped off at our home on their way to California where they were to make their new home in 1949. They had seen Pink Formal in bloom in John Ohl's garden in Wichita, Kansas and stopped by to place their order in person. The years that followed found our friendship growing and we met at several A.I.S. conventions. In 1957 at the Region 14 meeting I saw Larry's MADEMOISELLE, perfection itself, in the home garden, yet this was then a several days old bloom and unfortunately it folded during the night so the regional visitors, who could not stay over, did not see this magnificent flower. Anyone who knows the Gaulters realizes what perfectionists they are and when at last Larry approved of this iris and said it was the first he had ever produced he felt worthy of introduction, we knew how fine it really was for the Gaulters have attended iris conventions for some years and annually make a trip to the Oregon area. Perhaps Frances is, if anything, even harder to please than Larry, but together they make a grand team of enthusiastic fanciers and judges and to know them is to love them. Larry served as Regional Vice President for Region 14—his accomplishments legion. A surge of activity came to the region when the Gaulters moved to San Leandro for they brought with them and maintained the most up-to-date collection of iris in the area. Their enthusiasm is contagious. We were pleased to have them in Utah again last year as they were on their way to the A.I.S. meeting in Syracuse.

If the iris growers in the United States have not all met Mrs. Luzon Crosby most of them have come to know her iris creations. This year we are pleased to release more of her beautiful iris. BLUE CREST is the

tallest of the blue-bearded irises we have seen and I am anxious to see the seedlings that this, Lady Bluebeard and Marriott could produce for there is a lot of blue blood back of BLUE CREST. Well might this iris breed good whites with white beards, too. Delightful is the border iris which Luzon has named MOON TALK. A look at its pedigree conjures visions of the beautiful seedlings that might come from it including border plants as well as tall. MR. WONDERFUL is a very wide medium pink that visitors to the UTAH IRIS SOCIETY SHOW admired last year. PARTY PETTICOATS is a real charmer that will breed great seedlings in many colors, and is the answer to an arranger's dream. PARTY PINK might be the frosting on a party cake it is that luscious. And finally the finest white from the cross that produced UNINTA and LILAC BOUQUET—beautiful SWANDALAY. These are six beautiful iris of which Luzon Crosby may be justly proud.

While visiting in Utah in 1957, Dr. Frank B. Galyon of Knoxville, Tennessee came by for a visit. Later I was privileged to grow FIRE CHIEF the superb variegata which I am now introducing for him. So well did the judges of the A.I.S. like this flower that it won two Highly Commended awards, once under number and in 1958 under its registered name. Being a half sister to Mrs. Crosby's own ON PARADE these two should produce excellent variegatas if crossed and perhaps some fine amoeanas and neglectas as well. Another great iris and a first introduction.

Margaret Albright's border iris, TWO BITS, is being introduced for those interested in this class of iris, and the many who have requested its introduction. Aren't we glad all types of irises have gained popularity throughout the world and that the fad for bigness has not taken over completely?

Catherine and Kenneth Smith sent DOLLY LOREY, the lovely blue iris which they named for one of their charming daughters-in-law, and we liked this excellent performer every bit as well as its Award of Merit winning sister seedling SOUTH PACIFIC. The stock of DOLLY LOREY is plentiful, we are happy to say, so it is being priced within the reach of many hybridizers and growers. The Smith's need no formal introduction, their accomplishments are monumental.

And for Z. G. Benson of Wichita Falls, Texas, I am listing his very smooth chocolate colored iris CHIPETA. I made some crosses using this and Defiance and let the seed go to another grower and some very good reds were born. CHIPETA x JUNGLE BIRD also produced some rich blends. This fine iris looks, therefore, to be an excellent breeder. Z. G. Benson has, himself, found it to be an excellent RED breeder. Crossed to RUTH COUFFER, BANG, TRIM, FIRE BRIGADE, and some of the other new reds and browns it should be an excellent parent. A goodly stock of CHIPETA allows us to put a low introductory price on this very fine pod and pollen parent. Another fine first introduction from a hybridizer we will be hearing a great deal of it in the future. Z. G. Benson is also fast becoming one of the leading hybridizers and growers of fine hemerocallis. Mrs. Benson shares the hobbies of "Ben" and is a keen fancier and "critic." We were pleased to have them visit us in the early season last year.

Enthusiasm and study is developing Mrs. Louis (Crescent) Deru of Ogden, Utah into one of our leading hybridizers. Crescent "plays the field" in her quest for better garden irises for she has a wealth of material in dwarfs, medians, border iris and tall. The one we are introducing this year, CHOCOLETO, came by accident, however, for this charming small-flowered brown certainly was not planned for, but now that it has made its appearance has Crescent busy working for more of its kind with further refinements. We think you will enjoy this, her first introduction. Crescent is one of the State's leading hand-loom experts as attested by the numerous awards at our Utah State Fair. She has other talents, too, and shares with her husband, Louis, a love of the great out-of-doors (hunting and fishing) for which Utah is noted and blessed. And if this were not enough to keep one busy (together with a fine family of young people) Crescent has joined with Melba Hamblen in some night-school classes of genetics and botany. As the radio announcer used to speak of "Helen Trent.": "Life can still be beautiful at thirty-five and even beyond." (not an exact quote—forgive the liberties.) Crescent is about thirty-five and I'm sure life for her becomes more exciting each year.

Visitors to the A.I.S. Convention here in Utah in 1954 will remember the garden of Margaret and Fisher Harris at 1422 Military Way in Salt Lake City, with its wealth of garden material other than irises for Margaret is a true botanist and has, undoubtedly, one of the finest collections of Penstemon in the world. It was Margaret who started collecting iris just to make their garden beautiful, but in 1945, she and Fisher came to my garden and took home a seedling from Hall's 42-10 x Loomis' S. Q. 72 (an orchid or fuschia color) and I believe this started Fisher on his hybridizing "craze" and is now the foundation of a host of fine pinks, orchids and rich salmons to be seen in their gardens together with seedlings of other colors (not from pinks) but of uniform quality for Fisher is very selective in his hybridizing and perhaps a dozen crosses will suffice in a season. The Harrises like gardening, enjoy their friends, and give freely of plants and pollen to "commoner" and "expert" alike. Fisher served as Regional Vice President of this Region 12 for a term and has done much to foster the growing of better irises. He is one of the states most gifted and highly respected attorneys and one of the real authorities in the state on WATER—that precious commodity that has made our "desert blossom as the rose." Books could not tell you of the accomplishments and interesting facets of this wonderful couple, Margaret and Fisher Harris, and yet I try, in a paragraph, to give you a small introduction to them.

Again we are pleased to co-introduce with Melba Hamblen two fine irises. PRETTY CAROL, which was named for their charming daughter, we believe will be one of the important new parents in the Orchid-Pink class, and crossed with Lovely Diana should give magnificent things. When Pretty Carol was shown for the first time at the Utah Iris Society show in 1956 (and was awarded the cup for best seedling) I later asked Fisher Harris what he had seen that he liked and he replied: "There is only one iris in the show!" Of course he was referring to PRETTY CAROL, and so it was with every visitor for it held all viewers spell-

bound. While PRETTY CAROL is gorgeous in the garden she is even more beautiful under artificial light. It would seem this flower has a bright future as a show specimen. PRETTY CAROL'S width and height came, perhaps, from the grandparent, Pink Tower, while Radiation and Mary Randall both furnished much of its smooth coloring. An excellent pollen parent but somewhat difficult to pod. Melba had several striking seedlings from PRETTY CAROL last year, there are more on the way. I should bloom a few this year. Melba's FASHION SHOW, the other introduction, is certainly the standard of quality we have come to expect of this great hybridizer.

Twice we have had Gordon Bootes of New South Wales, Australia visit with us. Gordon is, I must say, a difficult man to please, and although he has been hybridizing for quite a number of years ANEMBO is the first iris produced he has felt worthy of a name. Blooming on established plants last spring we were taken with its several outstanding qualities—its heavy substance, great width, size and its fine clear coloring. The very heavy stalks will be an asset to those needing this quality in weak-stalked varieties. We feel ANEMBO (An Australian word meaning Peaceful) should be a tremendously good parent for many colors including pinks, salmons, yellows, whites with tangerine beards, blues with tangerine beards as well as fuchsias and orchid colors. Branching is close therefor a wise choice of mates for this great flower will assure better branching among the offspring of ANEMBO. I am rather anxious to see this iris crossed with LOVELY DIANA, PRETTY CAROL, MADEMOISELLE, CREAM CREST, VALIMAR, GAY ADVENTURE, MARLYN C, ENCHANTED VIOLET, JAN ELIZABETH, GLITTERING AMBER, JUNE'S SISTER, LYNN HALL, NEW ADVENTURE, etc.

IMMORTAL HOUR comes from H. Senior Fothergill of London, England. This will be the third iris I have introduced for this energetic and versatile hybridizer. His first introduction was DOROTHY KING an exciting parent and one that is proving useful for breeding exquisite ruffling—hardly expected from its own appearance. SILKEN DALLIANCE was introduced last year and we have a black and white picture in the catalog this season, which, of course, does not show the lovely blendings of color in this hybrid. "John", as we in the International Robin know and address him, is keenly interested in (and doing much work with) the regelias and their derivatives. We have several of his hybrids that are three-fourths regelia and other named and selected seedlings here on trial. Seldom does one find a plant breeder whose interests are so wide. We look for more great things from his careful work. Perhaps now that John is relieved of the responsibilities as President of the Iris Society of Great Britain he will have more time to devote to his favorite hobby, thus giving iris lovers further pleasure from his handiwork.

And for myself I have introductions which I hope you will like. Some of these have been well received by A.I.S. judges who have given them the H.C. award, but not all have I distributed, or guested out, and we hope the "little ones" (for the border) may also be enjoyed. DON WATERS grew UTAH VALLEY from seed I sent and requested to keep "birthright" of since it was a cross I particularly wanted to use in my work to get a pronounced white area (not haft markings) in the falls of the blues and violets. When this cross was blooming at Don's home garden I wrote asking if he might send me some pollen from these (if good) and I received a letter in reply that there was nothing good in the seedlings, but a day or two later an air-mail message brought the news that such a one as I had hoped for was blooming and that several discriminating judges were high in their praise of it. Unfortunately it had no pollen. Mr. Wadland (the "grandfather") was in the garden, so Don gave this seedling the number WAD 56. In 1955 there bloomed in my seedlings a very smoothly finished cream with pale lemon hafts. I got busy in the shipping season (as always) and did not lift the two plants of this No. 55-10 until very late in the summer—actually too late for safe transplanting in this mountain area, but I sent a rhizome to Charlie Salzer at Bakersfield, which plant thrived and we saw and did not recognize its beauty so magnificently was its height, size and vigor. When I asked Charlie what this was he laughed and said, "Strange is the "father" who doesn't know his own "Child." Five husky rhizomes were returned to me in the early summer and CREAM CREST was once again home and starting growth for the days of her debut. The time has come. It may be her one-fourth Spring Sunshine blood, and the twice Cream Gold and Gold Ruffles blood, will cause her to be slightly tender in some rigorous areas, but we know she is particularly suited to the warmer climates and blooms very well even in our intermountain climate. I have seen nothing to compare with her serene chaste beauty and the lemon hafts (brushed on) certainly add a note of charm. I wanted to name her "LEMON AND IVORY" but some objected—and voiced the opinion that we Americans attach the word "Lemon" to something that is faulty or sour—for instance a new car off the assembly lines that has some unsound parts, or does not function properly, is always referred to as "lemon." However, I still feel the name descriptive and may be brave enough one day to use it if one of my readers has not already grabbed it up! Then I have a William Mohr seedling I have kept around a long time because it always performs well. This I have named MARBLED MOHR. It is in the same color-range as SPLASHES but unlike it an easy grower. It carries a fine plicata heritage and I can see its use in a worthy plicata program. SMOOTHO I have named because I personally like it. There will be those, perhaps, who do not. It is one of those apricot blends with shades of orchid. SMOOTHO had several fine apricot sisters and two white sisters with tangerine or apricot beards. It should be a useful breeder and has, what I think, an excellent pedigree.

Arthur Schuman wrote from Florida of the passing of his beloved wife Diana whom I had come to know and love for her many fine qualities. Diana was active in the Detroit area iris society and was one of the A.I.S. judges there until the rigors of the climate in the winter, and conditions of health, brought a decision for a move to Florida where she and Art spent several happy years. I heard from Diana quite often and she would tell me of her crosses and hopes toward certain goals. Unfortunately when one is away from a garden weeds have a way of taking over. Art may have found an iris worthy to bear her name had not circumstances such as these prevailed. So I have named, in her memory, a gorgeously colored fuchsia or orchid-pink iris for it is fittingly beautiful as is the soul of this grand lady, and may it always remain a

memorial to LOVELY DIANA. Last year I mentioned an iris which I would name JAN ELIZABETH for our youngest daughter who was only two years and three months old when this dainty flower was found in the seedlings by our friend George Mayberry. After its beauty was agreed upon by the several judges who happened to be in the garden at the time, we showed the flower to Jan Elizabeth and asked her if she would like us to name it for her. Her enthusiasm over such a prospect overwhelmed us since we realized she did not understand the impact of such a declaration, but her every expression showed adulation for the flower and when we asked her what the name of the flower was she said "Jan Ewizabet." However to our dismay when we arrived in the home garden she, upon being released from the car, walked over to some old "flag" in the yard and asked to our amazement (and amusement,) "Is this Jan Ewizabet?" She has since come to recognize her namesake. In the cross that produced VIOLET LEATHER there were several fine things, all very large with heavy substance. The pale blue No. 57-111 had not as much increase and could not be released, but we hope to bring it out next year. VIOLET LEATHER was liked particularly by Larry Gaulter whom, I believe, appreciates substance in a flower—this one has it. Then I have the three "little" ones: DROP O' LEMON (You see I used "LEMON" anyway), LEMON FLARE (and again—so I am not afraid) which actually is not quite a true Lemon, and LITTLE COTTAGE. These three all came from Baria as pod-parent. Little Elsa is the pollen parent of DROP O' LEMON while a (Citrea x Bride) seedling is the parent of the other two. After having bloomed quite a lot of seedlings from Baria, I cannot praise it too highly as a parent for both dwarfs and intermediates for it imparts such a lovely form and smoothness to its offspring. We are blooming Mrs. Fitzgerald's crosses from Baria x Pink Formal and are much taken with their smoothness and form. There are several yellows of brilliant coloring. No. 1 of these has been sent to Walter Welch for trial and we hope it will compare with other Medians in the same color range. We think these Baria x Pink Formal seedlings hold great breeding possibilities for fine pinks and many other colors in dwarfs and border irises, depending on the direction one wishes to go in a hybridizing program. We are going to be happy (Helen Fitzgerald and I) to share some of these hybrids with you—especially the good ones that will not all be named for they are tremendous growers and will produce some seed.

Because of the heavy costs involved in keeping up the large field plantings, catalog printings, postage, etc., etc., you will note that I am asking 50c for the catalog now. This is the actual printing cost and over this there is postage, etc., previously it cost 1 1/2c to mail a catalog. The cost is now 6c; and there are envelopes, printing of envelopes, freight on the catalogs to Provo from the printer so 50c does not actually cover these costs. Our time involved in many ways to address envelopes, attach postage, etc., we cannot value or "charge" for. But if our catalog is of value to A.I.S. members who yearly receive their copies, without request, we are happy, even if an order is not forth coming from all. (What would we do, anyway, if 5,000 orders came in and some repeated by sending additional orders?) But we do appreciate those many fanciers who send contributions and volunteer expressions of appreciation for the catalog.

We stay in the fancy, grow, hybridize and introduce iris because we like them. We do not expect to get rich or to be able to build ourselves a Mansion, however, we hope to have enough left at the close of the season to feed and clothe the little family. So we hope the price asked for the catalog of those who do not send us an order may help to insure the printer of his fee and enough to assure our continuance in this field we love so well. We hope also to continue to bring you outstanding developments in iris and hemerocallis.

Again we wish to thank all for their continued support and friendship.

We hope this will be a wonderfully rewarding year of gardening for you all.

Happy gardening. Sincerely,

"Uncle Tell" and family.

1959 INTRODUCTIONS

Varieties marked with "****" contain *Oncocylus* or *Regelia* blood.

ANEMBO (Gordon Bootes, Australia) Early-Mid-season. 38-40 inches tall. (Helen McGregor) X (Hit Parade x Pink Formal). The name is Australian Aborigines meaning PEACEFUL. Certainly this huge light yellow self is just that, yet quite overpowering and commanding in its great substance coupled with size. There is a light area in the falls, the only other color save the slightly deeper beard. The petals have great width, the standards are beautifully domed, the falls flaring. Very heavy upright stalks could be lower and better branched. I feel it is a great iris with marvelous breeding potentialities.\$20.00

BLUE CREST (Luzon Crosby, Utah). Early to Late. 40 inches tall. ((Snow Flurry x Cloud Castle) x (Sylvia Murray x Cloud Castle)). X (Blue Throat). Lovely, flaring, tailored, white self with a delightful blue beard. The tall stalks are very well branched. With this breeding BLUE CREST should breed superb blues, whites and whites with both self and blue beards. This should make an ideal mate for Lady Bluebeard and MARRIOTT. No. C57-9\$25.00

CHIPETA (Z. G. Benson, Wichita Falls, Texas). Early-Midseason. 32 inches. (Cordovan x Argus Pheasant). Here is a true chocolate-brown free of haft markings. CHIPETA is proving a great breeder for browns, tans and reds. This should be an ideal mate for DARK CHOCOLATE, BINGHAM, SPELLBOUND, BANG, MILLIONAIRE, RUTH COUFFER for coppers and browns and with some of the new reds for seedlings in this color. A good and easy grower. Plentiful stock.\$10.00

CREAM CREST (Tell Muhlestein). Early-Midseason. Late. 36 inches. (49-30, sister to Utah Cream, x Yellow Tower) X (49-30 x Spring Sunshine). Very wide cream self, hafts ruffled and smoothly brushed (not venied) lemon-yellow. Guested in three Region 14 gardens this received 15 votes for H. C. award in 1958 under number 55-10\$25.00

DOLLY LOREY (Catherine and Kenneth Smith, Staten Island, N. Y.) Midseason. 36 inches. (Sister to SOUTH PACIFIC). Equally as lovely as the now famous SOUTH PACIFIC, this is slightly deeper in coloring and carries a light yellow beard that sets the flower color off. Substance and form are excellent. Named for the Smiths' daughter-in-law.\$10.00

FASHION SHOW (Melba Hamblen, Roy, Utah). Early-Late. 36 inches. (Helen McGregor x Hit Parade.) X (Mary Randall). Truly a glorified Grand Canyon. Actually the color is violet with mauve shadings. Glittering gold dust extending from the hafts, covering much of the fall petals. Some ruffling, the standards are closed and the falls are wide and flaring. Beard is bright orange. Branching good and stalks are heavy. H. C. '58. No. 53-18-1...\$20.00

FIRE CHIEF (Dr. Frank B. Galyon, Knoxville, Tenn.) Midseason-Late. 38 to 46 inches. (Gypsy x Louise Blake). This brilliant, clean variegata has received the highest praise from discriminating A. I. S. judges all over the country. Mrs. Leo Reynolds (Serlena) of "Haven" fame wrote: "I understand you will introduce FIRE CHIEF, Dr. Galyon's great variegata. It is, without doubt, outstanding in its color class." So well have the judges liked it that it has twice won the H. C. award—once under number and in 1958 under its name. The standards are brilliant yellow, the falls are a rich self without the border so often associated with this color class. The contrast is striking and harmonious. Branching here was surprisingly good on first year plants, although the branching does vary. Will pod with difficulty, however, has fertile pollen. FIRE CHIEF should breed excellent variegatas and amoenas.\$25.00

IMMORTAL HOUR (H. Senior Fothergill, London, England). Early Midseason. 36 inches. (Helen McKenzie x Dorothy King.) Gorgeous white with a warm beard, wide petals of very heavy substance. Another great iris heavily bred from Purissima blood. The stalk with its fine branching leaves little to be desired. Winner of the coveted Romney Towndrow Award in 1956 (for the iris with best form) and was selected for trial at Wisley the same year. With this breeding IMMORTAL HOUR will be a great parent for blues and whites.\$20.00

JAN ELIZABETH (Tell Muhlestein.) Early-Midseason. ((Salmon Shell) x (D. Hall's 44-09, sister to Hit Parade, x Pink Formal)) X (Rosedale). Luscious florescent-like colorings blended in a most charming manner. There are various shades of flamingo pinks, palest orchid-pink and peach set off with a pinkish-cerise beard. The ruffling is so intense it is almost lacing. The standards open and show such pretty parts: lovely laced styles and beautiful beard. Because of the Salmon Shell and Rosedale blood this should become a great breeder for lace. A very limited stock. One to a customer. No. 57-70. ...\$35.00

JUNE'S SISTER (Tell Muhlestein.) Early-Midseason-Late. 36 inches. (Party Dress x Pink Fulfillment). This is a sister to JUNE MEREDITH, FIRST CURTAIN AND LATE APRICOT, and is the parent of Mrs. Hamblen's Glittering Amber. When you see JUNE'S SISTER you will know where Glittering Amber inherited its ruffling and open standards as well as much of its coloring. Breeders have continued to ask for this for breeding purposes, so I have decided to give her a name in honor of June Meredith's lovely sister Donna Bennett (my niece) living in Bountiful, Utah. The color of this iris is a blend of apricots. The ruffled standards are open, but retain their position the life of the flower. The falls are likewise ruffled, are very wide, round and flare almost horizontally. JUNE'S SISTER is proving a fine parent giving width to its seedlings and should, if crossed to things with closed or domed standards, produce fine pinks, apricots, orchids and many other colors. Widely distributed under number 51-11E. \$5.00

1959 INTRODUCTIONS — Continued

LAKE ISABELLA (Charles Salzer, Lake Isabella, California). Midseason-Late. 40 inches. (Pinafore Lass x Kim.) This big white plicata nicely marked with violet has the bearing of a stately queen. The markings are even and there is no blaze-mark down the center of the falls that mars so many otherwise lovely plicatas. Since Kim is a decendent of the great breeder Purissima we think this grand plicata holds unlimited possibilities for breeding fine plicatas and could be used with Orchid Queen, Memphis Lass, Taholah, Dotted Swiss, and Caroline Jane to good advantage. LAKE ISABELLA is the first introduction from its erratic pod parent. **\$25.00**

LOVELY DIANA (Tell Muhlestein). Early-Midseason. 36 inches. (Cathedral Bells x Pink Enchantment.) Bright Orchid-fuchsia with a colorful fuchsia-cerise beard. While this is in the color range of such lovely iris as Mary Randall and Pretty Carol it is a little more "red" due to the fuchsia influence. The flowers are bright in the garden and are nicely formed and have good substance. Crossed with Enchanted Violet (and its sisters,) Anembo, Mary Randall, Pretty Carol, Lynn Hall, Radiation, etc. LOVELY DIANA should give some lovely things and could produce real pinks with pink beards. Named for our friend the late Diana Schuman—an enthusiastic lover of irises whose home was in Detroit. Awarded an H. C. for 1957 under No. 56-6F..... **\$25.00**

MADemoISELLE (Larry Gaulter, 20124 Catalina Dr., Castro Valley, Calif.) Midseason-Late. 38 inches. (Lavenesque x Pathfinder.) A masterpiece of iris sculpture. These blooms look to have been fashioned by some master-maker of ceramics so heavy is the substance and so deftly are the full, wide, falls gently ruffled and held rigidly, but gracefully flared. The falls are so wide at the hafts that they almost touch. The color is lavender-rose and the hafts are smoothly flushed (brushed) sienna. Heavy stalks bear up the very large blooms and many buds to perfection. MADemoISELLE is indeed, a triumph in hybridizing and with this marvelous pedigree will be in great demand by hybridizers who like quality. She should be useful in breeding this color, orchids, pinks, blends and perhaps yellows and other by-products. We envision great seedlings from this fine iris crossed with Gay Adventure and its sisters, LOVELY DIANA, PRETTY CAROL, GRACELLE, AMETHYST FLAME, ANEMBO, CHARMED LAND, LILAC BOUQUET and other grand things. Because of its late blooming season in the home area few judges have seen this fine iris, but we know it has a long and brilliant career ahead both in popularity and for hybridizing. Originally registered as FOREVER SPRING which name had already been taken. We mention this since several fanciers, including myself, thought this was to be its name. No. 56-16 **\$25.00**

MARBLED MOHR* (Tell Muhlestein). Early-Midseason. 40 inches. (William Mohr.) X (47-15: ((Midwest x Mme. Louis Aureau) x (Aldura)). Large Mohr-type flower of medium violet splashed white. Good growth and bloom. Could be a great plicata parent. **\$5.00**

MARRIOTT (Mrs. Parry (Agnes) Marriott) Ogden, Utah.) Midseason. 30 inches. (White Wedgewood x The Admiral.) Flaring pale self with a striking blue beard. Very smooth in its finish and coloring it makes a gorgeous border plant. Fertile both ways we feel it has a great breeding potential for those interested in blue-bearded irises. **\$15.00**

MISS MARTHA* (H. M. McLeod.) Very early, intermediate season. 21 inches. (Anndelia x True Delight.) x (Korolkowi Violacea.) This lovely little regelia hybrid was named for the daughter of its hybridizer. A most interesting combination of colors. Standards are light raspberry veined deeper raspberry-red. Falls creamy-white changing to light raspberry at tip, and veined deep raspberry-red. The heavy veining forms a signal patch at tip of the dark bronze beard. This could be a most interesting parent for many colors including fine plicatas. Substance only fair. **\$10.00**

McLEOD* (H. M. McLeod, Tenn.) Early-Midseason. 36 inches. (Snow Flurry x I. korolkowii). Delightful, medium, sized flowers that show their Snow Flurry heritage in the flare and ruffling and their I. korolkowii blood by the slightly elongated, narrowness of the petals. The charm cannot be denied and arrangers of flowers will love it—especially those needing a "Green" tone. Since the color is pale green (Chartreuse) of a very smooth quality and the beard is also green. It is, without doubt, the finest light green self we have seen. It is our hope that McLeod may be found fertile for its potential in breeding for this color is truly great. We are pleased Aileen let this delightful iris be named as a memorial to her beloved husband, and our personal friend. No. R52-5-2 **\$15.00**

Watch that birdie.

1959 INTRODUCTIONS — Continued

MIXED EMOTIONS (Neva Sexton, Wasco, Calif.) Midseason-Late. 36 inches. (Golden Ruffles x Azure Skies.) Looking as though it were carved out of blue-tinted alabaster, and of such heavy substance one would almost think it had been cast of this precious mineral, the flowers have a difficulty folding up when their several days of usefulness are spent. The actual color is pearly white (Blue-tinted white) with chartreuse smoothly brushed on at the hafts. The styles are chartreuse and the stigmatic lips are blue (quite an unusual feature, I found) and the chartreuse beard is tipped blue. The very round falls are deftly ruffled near the hafts which are so wide they almost touch one another and the falls flare horizontally yet have a lilt and charm that keep them from appearing too formal. Mrs. Sexton is to be complimented on this great first introduction and we give it our highest recommendation. We have requested it widely from Oregon, California to Ohio so it is hoped that fanciers all over the United States may have an opportunity to see this magnificent flower, for it was never seen outside its home garden until last year. No. N-O-6.\$25.00

MOHR FUN* (Jim Gibson, Porterville, Calif.) Early to Midseason. 32 to 36 inches. (Nomohr x Capitola.) This is a very fascinating hybrid twice descended from the famous Wm. Mohr. As with many Capitola derivatives the midribs of the standards are not quite as strong as we would desire, but we feel this could be one of the great breeders for Aril lovers. Standards are light violet. Falls mauve shaded violet and tan. The beard is tipped violet. Vigorous and a rampant increaser. A good stock. ...\$10.00

MOHRNING HAZE* (Walt Luihn, 523 Cherry Way, Hayward, Calif.) Early-Midseason. 36 inches. (54-1, Snow Flurry x Prof. Mitchell Blue sdlg.) X (Capitola.) Large greyed lavender-blue self of perfect form. The beard is blue and some of this same coloring is poured out over the area near the beard giving a suggestion of a "signal patch." The falls and standards measure four inches across. MOHRNING HAZE blooms and increases profusely and is perfectly hardy. We do not know the breeding of the Mitchell blue seedling, however, it is likely a Snow Flurry x Chivalry cross. This iris should be useful to work for blue beards and for ARIL breeding. We think it will be particularly fine with some of the new C. G. White hybrids. MOHRNING HAZE was awarded an H. C. in 1957, and in 1958 won the Gold Cup for Best Seedling in the Sacramento Iris show and received the C.O.C. as well. Walt Luihn's first introduction and a fine one. No. 56-C.\$20.00

MR. WONDERFUL (Luzon Crosby.) Early to Late. 36 inches. (Tell's 49-31: Hall's 44-09, sister to Hit Parade, x Pink Formal.) X (Pink Enchantment.) This very wide rich pink self including a pink beard created quite a stir at the Utah Iris Society show in 1958, and was there awarded the C.O.C. The hafts are brushed with yellow, the only other color in the flower make-up. The extra wide, round falls flare horizontally. We feel it will be a magnificent parent, for not only does it have width and good substance, but it has color and a very fine, heavy, stalk. A good and vigorous grower. C56-20.\$20.00

PARTY PINK* (Luzon Crosby.) Early to Late. 38 inches. (Tell's 49-19 A: ((Elmohr x Golden Eagle) x (Pink Formal)) x (Pink Papa)) X (C52-6: (Sister to Pink Formal x Tell's 48-36 A: Hall flamingo Pink sdlg. x Pink Formal.) This large pink has a definite lavender cast which actually makes it much more pink than pinks with the apricot, salmon or peach (yellow) influence. Beard is the same general color of the flower, but richer. Maker of small rhizomes, but of very fast growth. A good stock permits a price of modest range. The slight Elmohr blood makes it fascinating. Some of the same blood of my 49-19 A is giving me fine pinks.\$15.00

PARTY PETTICOATS (Luzon Crosby.) Early to Late. 40 inches. (Snow Flurry x Gold Ruffles) X (Little Sweetheart.) Ruffles and more ruffles make this medium-sized white flower extraordinarily beautiful. Actually the flowers are a little small for the height of the well-branched stalk, but the charm of the flowers both in the garden and in arrangements is unmatched. We feel PARTY PETTICOATS will make an ideal parent for ruffled flowers, blues, whites, possibly pinks, yellows, creams and could be used in a program for border iris if bred to such things as Moon Talk, Yellow Dresden, Golden Flash, Two Bits, Rosedale, Little Cottage, etc. No. C56-45.\$20.00

PINK MELODY (Fisher Harris, Salt Lake City, Utah.) Midseason. 32 inches. (((Hall's 42-10 x SQ 72) x (Chantilly)) x (Heritage))) (June Meredith.) Yes, PINK MELODY is pinker than its pollen parent. The standards are ruffled and nicely held. The falls ruffle, flare and then recurve somewhat in the manner of the grandparent Party Dress. Altogether a beautiful garden subject and truly a charming flower. We think the pedigree unexcelled for possibilities in breeding deep pinks and heavy lacing. It should be very useful, too, for working in the Median class. This mated to Yellow Dresden, Golden Flash, Yum Yum and Two Bits will breed some delightful small flowered pinks with plenty of lacing. A vigorous and healthy grower, but a producer of small rhizomes. This should become as popular as Fisher Harris' first introduction, Little Gem, and a lovely companion for the border.\$20.00

1959 INTRODUCTIONS — Continued

PRETTY CAROL (Melba Hamblen, Roy, Utah.) Midseason to Late. 40 inches. (Radiation x Pink Tower.) X (Mary Randall.) Gorgeous, stately, queenly and every other adjective one might conjure to use in its description and praise. Every connoisseur of fine iris has praised this beautiful creation. The color is rich Orchid somewhat in the same range as the pollen parent, Mary Randall. There are few in this color class with the height, size and great width of petals. Shown at Salt Lake City in 1956 PRETTY CAROL was awarded the cup for best seedling and received the C.O.C. from the A.I.S., and in 1956 received an H. C. award. PRETTY CAROL is destined for great popularity and should be a wonderful parent. No. 53-12.\$25.00

SINA MARIE* (C. J. Paul, Salt Lake City, Utah.) Midseason-Late. 38 inches. (Elmohr x Three Oaks.) Perhaps this could best be described as a larger, heavier substantiated and richer Elmohr. The color is mulberry-red yet there seems to be an underglow of warm rosy-tan in the falls. The Styles are those giant-sized styles found in the oncocyclis. Stalks are heavy, foliage healthy. SINA MARIE has that superb substance we hope for in modern iris so they withstand all that mother nature can and does "hand out." For lovers of quality, and especially those who like Wm. Mohr derivatives, we recommend this grand iris—Mr. Paul's finest achievement. No. 49-29. ...\$20.00

SMOOTHO (Tell Muhlestein.) Midseason. 36 inches. (Hall's 44-09 x Pink Formal.) x (Apricot Glory.) Light apricot smoothly brushed with hints of delicate fuchsia. A good stock permits a low introductory price. This should be an excellent parent for many colors including whites with tangerine beards. No. 51-86A\$5.00

SWANDALAY (Luzon Crosby.) Early to Late. 40 inches. (Swan Ballet x Mt. Emmons.) This wonderful white self with a white lemon-tipped beard was the best of all the gorgeous white seedlings from this cross but was the one with the least increase. Uinta and Lilac Bouquet were introduced and now we are happy to have enough of this to release. The petals are wide and full and the falls flare and ruffle attractively. The name for this iris might have been "WHITE PERFECTION" so very perfect is its form and beauty. The well branched stalks are heavy. Her mother, SWAN BALLET, is very proud, so is "grandpa." C56-12E. \$25.00

UTAH VALLEY (Tell Muhlestein.) Midseason to Late. 40 inches. (C. Rees's Snow Flurry sdlg. X Violet Grace) Large violet self but the falls have a wide, round, white area in the center, so it is done in the manner of Pinafore Lass. Not a fast increaser. H. C. 1958 No. WAD56.\$25.00

VIOLET LEATHER (Tell Muhlestein.) Midseason to Late. 36 inches. ((Pierre Menard) x (Sky Song x Cahokia)) X (Utah Sky.) Light violet, near chicory blue. Large flowers with falls that flare horizontally and the substance is so heavy it reminds one of leather. The branching is close and high on heavy stalks. I should like to see this crossed with Swan Ballet or some of Mrs. Crosby's new things like Swandalay or Lilac Bouquet. No. 57-111 A. H. C. 1958.\$20.00

BORDER IRIS for 1959

CHOCOLETO (Mrs. Louis (Crescent) Deru, Ogden, Utah.) Early to Late. 22 inches. (Grand Canyon x Tobacco Road). A grand little border iris on well branched stalks. No pollen, but could be used as pod parent for more of this type. A very smoothly finished chocolate-brown flower with nicely flaring falls, and the size of the flower is in keeping with the stalk. No. T-52-20 H.C. '58.\$10.00

LITTLE COTTAGE (Tell Muhlestein.) Early-Midseason. 14 inches. (Baria x Sdlg: Citrea x Bride.) Small flowers in keeping with the height of the stalk. Perky, flaring white with yellow-brushed hafts.\$5.00

MOON TALK (Luzon Crosby.) Early to Late. 20 inches. (Flamingo Bay x June Meredith.) As pink as either of its two parents with just a touch more violet in the color which makes it all the more a true pink. The beard is similar in tone but deeper. No. C56-26.\$20.00

TWO BITS (Margaret Albright, Salt Lake City, Utah.) Early to Midseason. 20 inches. (Sister to YELLOW DRESDEN and YUM YUM.) Standards peach-pink, falls blended peach and yellow. A dainty, round and flaring flower as "cute" as its name. H. C. '57.\$10.00

DWARFS for 1959

DROP O' LEMON (Tell Muhlestein.) Very Early. 4 inches. (Baria x Little Elsa.) Very pale, clean lemon-yellow self including beard. Falls semi-flaring. Was nick-named "Lemonette" and two or three growers have it under that name. Very limited stock.\$5.00

LEMON FLAME (Tell Muhlestein.) Early to Midseason of the Dwarf season. 10 inches. (Sister to Little Cottage, see above.) Actually the color is more creamy-yellow than lemon. The round falls flare horizontally and there are three or four flowers to the stem. There is a bit of yellow texture veining in the falls. A prolific grower and bloomer.\$5.00

SPECIAL TO HYBRIDIZERS

Mrs. Melba Hamblen's H53-27E. Sister to ENCHANTED VIOLET, GAY ADVENTURE and VALIMAR. Fine, wide, clean, medium yellow self of very heavy substance. Melba gave me this fine yellow the year of its "birth." I had all the stock and since I feel it should be a great parent, is offered for sale without a name for those who may not yet have any of the introduced sisters.\$5.00

BEARDED IRIS for 1959

- ANKARA** (I. Craig '56). E-M. 36 in. (Joseph's Mantle x Gene Wild.) Deep velvety fancy plicata, richer than the grandparent Rich Raiment. Throat and beard yellow.....\$8.00
- ANNETTE** (D. Hall '55). M. 37 in. (Sunray x Dolly Varden) x (Mary Randall). Tawny Raspberry self with bright tangerine beard. H.M. '56. \$3.50
- ANTHEA** (Corey '53). M. (Pink Salmon x Pink Formal.) Semi-flaring salmon-pink that makes an outstanding garden clump. H.C. '51...\$5.00
- ANTHEM** (Schreiner '58). E-M. 40 in. (Gypsy Rose x Auburn) X (Savage). Imposing blend of fuchsia-purple with generous margining of bronze around the flaring falls. Net.....\$9.00
- ANTIQUE CHESTNUT** (Lyell '51). M. (Burning Bronze x Garden Magic.) Wine standards, pansy brown-red falls. Impressed us very much with its rich coloring and all-around good quality\$2.00
- ANYTIME*** (Cavagnaro '56). M-L. 38 in. (Alba Superba x Lady Mohr.) This is absolute perfection. Very round, wide, perfectly horizontal falls, huge globular standards all of superb, heavy substance. Off-white because of the Chartreuse lines at the hafts. Some purists might object to these, but to those who know quality the marvelously perfect bloom overcomes the slightly "dirty" appearance of the falls upon close inspection. Pollen somewhat fertile and will pod. It should hold great promise as a breeder when used to other fertile *Oncoclylus* hybrids, or to use with things that need width of parts. H.C. 54, H.M. '56. Net\$12.50
- APEX** (Tompkins '47). M-L. (Garden Glory x Jasper Agate.) Doing wonderful things for Tompkins in his new line of reds. Will prove of remarkable worth in breeding for reds..\$.75
- APPLAUSE** (D. Hall '56). E. 35 in. (50-24 x 50-23.) Mauve self with violet markings on the falls\$3.50
- APRICOT GLORY** (Muhlestein '51). M-L. (46-113; Golden Eagle x Hall's 4024) x (Gay Orchid). Smoothly finished light apricot, or salmon, with deeper hafts and self beard. Apricot Glory is one of the most exciting new parents. Its seedlings range in colors from white with red beards through various shades of pinks, salmons, apricots with orchid undertones, and the real break—pure oranges. It produces much richer, deeper colors than itself with quality blooms and substance. H.C. 49, H.M. '51, A.M. '56\$2.00
- APRICOT SUPREME** (Tompkins '51). M. ((Spring Maid x Far West) x (SQ 73 x Hall 42-05)) x (Pink Salmon). Very tall, well branched apricot-salmon of good size. H.C. '50, H.M. '51...\$.75
- APRIL SHOWERS** (Craig '54). M. 45 in. (Mariposa Mia) x ((Tiffany x Los A.) x (Belle Brunette) x (Joseph's Mantle)). Yellow and white bi-color with light "fancy markings", yellow beard. Wonderful plicata blood.....\$3.00
- ARAB CHIEF** (Whiting '44). L. (Raejean x Garden Magic.) Burnt copper-orange. Fine, late, garden subject and an excellent parent. H.M. '46. \$.75
- ARABI PASHA** (G. Anley '53). M-L. (Mirette: Blue Ensign x Windermere) x (Blue Ensign). A flaring deep cornflower blue with a blue-tipped beard. The flowers are tailored and smoothly finished yet the falls have a wave or dip in the very center giving it a jaunty appearance. Dykes Medal Award in England, 1953. 36 inches.....\$3.00
- ARABY ROSE** (Whiting 52). M-L. 38 inches. (Gypsy Rose x Arabian Nights.) Ruffled golden tan, flushed violet in falls.....\$1.00
- ARCTIC SPLENDOR** (Dubes '56). M. 38 in. (Kath-erin Fay x Violet Symphony.) Large white self of quality. The parent of REJOICE. H.M. '57. \$12.50

EVENSONG* (Frazee '50—now Mrs. Jacobson). M. (N. J. Thomas x sdlg.) Unusually wide and full. We predict a great future for this lovely Mignon and Patriarch purple iris. Nothing quite like it. Will set some seed. H.M. '50.**\$2.00**

EXOTIC (J. Linse '54) M. 48 in. (Prairie Sunset x Painted Desert) x (Sultan's Robe). Ruffled brilliant tan-rose suffused with gold. Ruffled styles and heavily lined hafts.....**\$2.00**

EXOTIC BLUE (Randolph '58). E.-M. 36 in. (Mata Hari x Black Forest) X (White Wedgewood). Light lavender-blue self with darker center; brown beard tipped blue. Could be useful for blacks as well as blues with blue beards. H.C. '57, H.M. '58 and runner-up for Pres. Cup '58.....**\$15.00**

EXTRAVAGANZA (G. Douglas '41). L. (Adios x Cortez.) Cream standards, red-purple falls. Exciting parent for neglecta and amoena breeding. A.M. '47.....**\$.75**

FABULOUS KATE (Muhlestein '50). M. (Late Sun x Radiant) x (Pink Formal). Very large medium yellow with delightful form. There are some brown lines on the falls when first opened, but these soon clear away after a few hours. We think this will be highly useful for breeding pinks, blends, yellows and new colors associated with the tangerine beard. Highly fertile pollen. H.M. '52.....**\$1.50**

FAIR DAY (McKee '49). M. ((Miobelle x Misty Rose) x (Moontide)) x (Moontide). Very wide, heavy-substantanced yellow amoena in the Pinnacle color range. Will be a superb parent for this color as well as rich yellows, blends or reds. H.M. '49.....**\$1.50**

FAIR ENOUGH* (C. G. White '35). E. 40 in. (Purissima x I. susiana.) Big blue that sets seed easily. With some of the fertile new hybrids should give exciting seedlings..**\$1.00**

I'm down to my last scent.

JULIET (Kleinsorge '46). E.-M. (269 x Prairie Sunset.) Flame copper and salmon. H.M. '47...\$.60

JUNE MEREDITH (Muhlestein '54). M.-L. 36 in. (Party Dress x Pink Fulfillment.) Very pink self proving a fine parent for breeding deep color and form. H.C. '53, H.M. '54, A.M. '56, Runner-up for Dykes Medal A.I.S. '58, Selected for Trial at Wisely, England '58.....\$10.00

JUNE BRIDE (D. Hall '52). M. Flaring deep apricot-pink of large size on 30-inch stalks. H.M. '52\$1.50

JUNE SUNLIGHT (McCormick '53). L., 36 inches. (Treasure Island x Spun Gold.) Velvety-appearing clean self of light cadmium yellow with heavy orange beard. Superb substance. H.M. '53\$3.50

JUNGLE BIRD (Geo. Mayberry '58). M.-L. 40 in. ((Tell sdlg.: Miogem x Campfire Glow) X ((Tell sdlg.: (Aubanel x Mayday) x (Lady Albright)). Exotic rich blend. Standards amaranth, falls amaranth blended rich claret and violet.\$20.00

JUNGLE DRUMS* (Plough '56). E.-M. 28 in. (Craig sdlg. No. 5: Purissima x Capitola) x (Joppa Parrot). Odd novelty, standards greyed lavender flushed brown, falls buff heavily splashed deep purple.....\$5.00

JUNGLE ROSE (Mayberry '58). M.-L. 40 in. (Sister to Jungle Bird.) Wide, rounded petals—falls flare horizontally. Color old rose. Great breeding prospect.....\$15.00

JUST ANNIE (Muhlestein '51). M.-L. (Sister to Fabulous Kate.) Very large yellow and white bi-color, as distinct and charming in form as "her" sister.....\$1.50

KALIFA BALTIS* (White '55). E. 30 in. (Oncobred.) Standards yellow-buff, falls golden olive-buff, flushed red. Small red signal below bronze beard\$15.00

KALIFA GULNARE (C. G. White '55). E. 30 to 40 in. Oncobred. Exotic, stunning, and all the adjectives one might conjure for want of better power of descriptive portrayal. Surely Mr. White realized the fulfillment of many of his hopes when he saw this, and other of his creations, open their first blooms in his Redlands, California, gardens. This has palest lavender standards with falls of dark brown, sporting a crimson signal and falls edged in golden buff. Broad bronze beard. Fertile both ways. Vigorous\$15.00

KALIFA KABUL (C. G. White '56). E.-M.-L. 40 in. Oncobred. This is said to be olive-green splashed brown, however, in my garden two clumps in widely separated areas both were of a chartreuse yellow without the splashing. Established plants sent up 40-inch stalks carrying 12 to 16 buds. Fertile both ways. Truly a grand achievement.....\$10.00

KANAB (Crosby '54) E.-M. 40 in. (Aztec Copper x Tobacco Road) x (Midwest Gem x Honeyflow). Reddish brown with heavy substance. Flaring falls edged gold. Great pedigree for rich coppers, tans and browns and perhaps some ruffling\$5.00

KANGCHENJUNGA (H. Miller '56). M. 40 in. (Jane Phillips x Desert Song.) This listing will be, I believe, its formal introduction to American gardeners. Described by H. Senior Fothergill in the 1958 B.I.S. Yearbook, p. 116, as follows: "This magnificent, huge, tall white iris is also a magnificent grower. It comes near to Harbor Blue in shape, though I think it even better in form than this blue relation, the roundness of its father having taken away that suggestion of over-long falls which many of its mother's children carry. The easy waving of both standards and falls entirely avoids that feeling of the monstrous which some of these very large varieties give." Selected for Trial at Wisely. Winner of the Townsend Trophy 1957, awarded for the best form.....\$15.00

KARACHI (R. Schreiner '58). M.-L. 35 in. (Port Wine x Bazaar.) Stunning red-purple plicata. Standards almost solid red-purple, falls same with a bold splash of white in center below beard. H.M. '58.....\$17.50

KAREN MOHR* (H. Knopf '58). M.-V.L. 34 in. (Lady Mohr x Lela Dixon.) Dainty white ground plicata sprinkled blue-violet with solid violet hafts and style arms. Lush brown beard. Crossed to Master Neil, Marbled Mohr, Gay Stripes and some of the new C. G. White hybrids this should give some unusual and beautiful seedlings\$15.00

KAZAK (Craig '57). E.-V.L. 38 in. (Joseph's Mantle x Rich Raiment) X (Sib.). Large sulphur-yellow ground plicata. Standards stippled Kazak (red), (hence the name), falls yellow with sharp, broad stippled margin of Kazak. Ideal branching. Good grower.....\$10.00

KEENE VALLEY (K. Smith '49). E.-M. 40 inches. (Lake George x Great Lakes.) Simply superb. Slightly deeper blue and much smoother than its sister Blue Valley. This will produce the blues we want and will surely go down in iris history as great. H.M. '50.....\$1.00

KEN (Rundlett '56). M. 40 in. (Lake George x Brunhilde) x (Ebony Queen). Hyacinth blue self, blue-tipped gold beard. This I envision as a great breeder for blues, violets and blacks for it has the branched stalk that any of these could use. Would like, also, to see this and Sea Lark crossed (relatives). H.M. '57.....\$6.50

KEZAR LAKE (Knowlton '51). M. (Great Lakes x Easter Morn.) Superb new blue—will surely produce quality blues and whites. H.C. '48, H.M. '51\$2.00

- KIKI** (Graves '51). M. (Helen McGregor x Great Lakes.) The 39-inch stalks display a marvelous blue fully worthy of its two Dykes Medal-winning parents. Cannot be anything but a wonderful breeder for blues and whites. H.M. '53\$6.00
- KIM** (McKee '51). M. (Wo-Peen x White sdig.) Beautifully formed plicata—an unexpected recessive from two whites.....\$1.25
- KING DAVID*** (Craig '51). M. (Acropolis x Capitola.) Tall heavy-substanced deep purple heavily lined with texture-veining.....\$1.50
- KING'S CHOICE** (Schreiner '57). M.-L. 38 in. (Top Hat) X (Black Belle x Blue Glow). Deep, rich, almost black—Midnight-blue. H.M. '58. \$10.00
- KING'S JESTER** (Stevens '48). M. (Madam Louis Aureau x ?.) At first glance this unusual plicata suggests Oncocylus blood. Bizarre as a butterfly's wings. Net.....\$0.75
- KLEINMOHR*** (Frieda Boshoff-Mostert, S. Africa). E. 28 in. (Elmohr x Snow Carnival.) Green-budded white. Flowers shot with green and lilac tints. Lovely onco form. Should be a great breeder. Lacks branching.....\$3.50
- KOL NIDRE** (D. Lyon '53). M. 36 in. (Vice Regal x Down East.) As might be expected from this cross a deep violet-purple bitone. Does especially well in warm areas.....\$3.50
- KWILSENA** (Tompkins '51). M. (Aria x sdig.: Honeyflow x Jasper Agate.) Stunning cardinal red completely overlaid with smooth chocolate so it appears a red-brown self. With this blood it is going to prove a remarkable parent for reds and blends. Pronounced: Quil-Sea-Nuh—an Asiatic-Indian name: Rose at Dusk...\$1.00
- LABAN EFENDI*** (C. G. White '54). E.-M. 32 in. Lavender and purple bicolor with black signal\$1.50
- LACY BLUEBONNETT** (H. Knopf '57). M.-L. 38 in. (Chantilly x Chivalry.) Laced blue-violet self with light (almost white) throat. Same cross as Dr. Wanlass and somewhat similar, but larger and different shape.....\$15.00
- LACY ORCHID** (Noyd '57). M. 30 in. (Prairie Sunset x Cigarette) X (Pink Sensation). Name describes this orchid-pink self with rosy-tan hafts and tangerine beard.....\$7.50
- LADDIE** (Miess '51). M. (Missouri x Great Lakes.) Not unlike its parent Missouri for coloring, yet under some lights appears more silver than blue. Not quite as ruffled as Chivalry from the same parents it is as charming, nevertheless. H.M. '51.....\$1.25
- LADIES DAY** (Marx '56). M. 42 in. (Snow Flurry x Sky Chief.) Personable, well branched, ruffled white self with yellow beard.....\$5.00
- LADY ALBRIGHT** (Muhlestein '50). M.-L. (Veishea x Bronzed Copper.) Standards "Dianthus" (copper), falls Amaranth (rosy deep lavender) edged color of standards. One of the most colorful blends I have seen and surely the richest I have introduced. C.O.C. '49. H.M. '50\$2.00
- LADY APRIL** (Suiter '57). M.-L. 34 in. (((Snow Flurry x Wabash) x (Caroline Burr)) x (Snow Flurry x Wabash))) x (Fairday). Fluted yellow amoena. Has pollen and sets seed. Breeding really fine yellow amoenas. Great blood for both yellow and purple (possibly blue) amoenas\$8.00
- LADY BLUEBEARD** (Suiter '55). E.-M.-L. 36 inches. (Snow Flurry x Sun Lakes). Ruffled white with heavy blue beard.....\$6.00
- LADY BOSCAWEN** (Graves '46). E.-M. (Purissima x Cloud Castle.) Large white of quality. Sister of Helen McGregor. Can's miss as a parent for blues and whites. A.M. '48.....\$.75
- LADY DOZIER** (Dr. Dozier '51). M. (Ormohr x Brunhilde.) A rich cobalt, or violet blue, very wide of parts due to its oncocylus blood. It is, without doubt, the finest Ormohr seedling we have seen. H.C. '49, H.M. '51.....\$3.50
- LADY ELSIE*** (Lyon '57). M.-L. 38 in. (Kol Nidre) x (Char-Maize x Elmohr). Bicolored deep violet. Falls plum purple shaded royal purple, beard antique gold tipped to base amethyst violet. H.C. '56, H.M. '57.....\$17.00
- LADY ILSE** (K. Smith '51). M. (Jane Phillips x Kenne Valley.) Superb blue, worthy of its great heritage\$2.50
- LADY MOHR*** (Salbach '44). E.-M. (King Midas x Alta Calif.) x (Capitola). Oyster and char- treuse with suggestion of a "brown" signal from the beard area. Always dependable to perform well. Holds up under adverse weather conditions. A.M. '46.....\$1.00
- LADY RUFFLES** (Dr. Schirmer '53). E.-M. 36 in. (Snow Flurry x 14 A.) Gorgeous ruffled white. \$7.50
- LAKE BREEZE** (O. Fay '45). E.-M. (Gloriole x Ballet Girl.) Delightful light blue. No pollen. Difficult pod parent. H.M. '45.....\$.75
- LAKE TENAYA** (Miess '50). M. (Mountain Sky x Great Lakes.) Splendid new blue with accent on form and quality. Top blue blood. H.M. '50\$1.00
- LAKE WALDEN** (Fraim '53). M.-L. 36 in. (Missouri x Lake Shannon.) Light medium blue bi-tone. \$1.00
- L'AMOHR*** (Craig '54). E.-M. 34 in. (Lady Mohr x Tangerine pink seedling.) Bi-toned orchid-pink with violet onco-markings and red-violet dash at tip of beard. Unusual.....\$3.00
- LAMPLIT HOUR** (Tompkins '47). M. (Lancaster x Honeyflow.) White standards, yellow falls. Will surely prove a useful parent for this color, blends, and possibly pinks. Breed to varieties with heavy stalks.....\$.75
- LAMPLIT HOUR** (Tomkins '47). M. 38 in. (Lancaster x Honeyflow.) Yellow amoena useful for this type of breeding, etc. The parent of Surrender\$.50
- LAND'S END** (Watkins '56). M. 38 in. (Chivalry x Snow Carnival.) Medium blue self with less lavender than other blues of this shade. Full, flaring, falls lightly fluted. Very fragrant. Proving a truly great parent. H.C. '55, H.M. '57. \$10.00

- LA NEGRAFLOR** (Crosby '57). E.-M. 38 in. (Storm King x Solid Mahogany) x (Sable Night). The name means "BLACK FLOWER" in Spanish, and this is really very black. Not only that it is a superb grower, has height and branching and is fertile both ways. Good size, fine form and substance. Dark beard. H.C. '56, H.M. '58\$20.00
- LANGDALE** (Randall '52). E. 36 in. Clean combination of lemon and white. The white falls are bordered lemon and have gold thumb prints on hafts. Could be good for plicatas, creams and lemon yellows.....\$2.00
- LANTANA** (DeForest '54). M. 36 inches. (Veishea Sdlg. x (Calderilla x Copper River). Bright golden-tan flushed orange-rose. H.M. '56.\$4.50
- LAS FLORISTAS** (Combs '55). E.-L. 48 in. (Joseph's Mantle x Orelia.) Grape-red patterned with Damascus Steel. Great blood for reds, plicatas and rebloomers.....\$5.00

SPURIA IRIS

Spurias belong to the beardless species. Their hard, strong, rhizomes are ideal for holding banks. They bloom after the tall bearded season has closed. Their orchid-like flowers are splendid for corsages or for bouquet work and arrangements. Here is an open field for hybridizers who desire to work with this species. Their disease resistance make them the easiest iris to cultivate.

(Spurias will be shipped after Sept. 1st—**Order these on a separate sheet.**)

If suprias become affected with disease (or rot, which rarely occurs) Carco X (a coal-tar product quite similar to creosote or stock dip) used according to directions sprayed over the leaves and rhizomes of spurias will clear up the trouble, or in stubborn cases it might be wise to lift, wash and dip all rhizomes in the solution. It is wise to wash all new (incoming) rhizomes in this solution before they are planted to insure good health. (Creolin, Creosote, or Lysol solutions may be used in place of Carco X if it is not available.)

AZURE DAWN (Nies '47). (ocroleuca x Monspur, F2.) Blue-lavender with lemon-chrome signal patch**\$0.75**

BIG CLOUD (Craig '50.) (Shelford Giant x Sunny Day) x (Wadi Zem Zem). Big white with some yellow influence. H.M. '56.....**\$4.00**

BLACK POINT (Nies '55.) (undoubtedly Bronzspur blood.) Buds appear almost black at the points when color first appears. However, it should have been better named with Brown or Chocolate in the title since the color is rich brown. H.M. '56.....**\$4.00**

BLUE ACRES (Mrs. T. A. Washington '48). 40 inches. Beautifully formed, flaring light silvery blue-white. Surely will be most useful with other varieties for new colors, and may be the one to breed the first all white spuria....**\$3.00**

BLUE NIGHTSHADE (M. Walker '57). 48 in. (Color Guard x Dutch Defiance.) Blue-purple effect; Victorian violet standards, falls same with lemon-yellow at base. H.M. '57.....**\$12.50**

- DORTHEA K. WILLIAMSON** (Williamson 1918). (fulva x foliosa.) Hexagona hybrid. Not a spuria, but a lovely violet hybrid that requires somewhat the same growing condition. Net\$.50

MEDIAN IRIS and INTERMEDIATES

These Medians or so-called Intermediates derived from the pumilas are usually very fertile both ways and should, therefore, be useful in hybridizing for dwarfs, border iris and tall. The ¾ths Tall blooded seedlings I have bloomed from these hybrids have ranged in height from 2 inches to 28 inches, with good variation of colors. We can well take advantage of the vigor and disease-resistance potentialities in these plants to say nothing of the breaks in color that might come through their blood lines.

- ALLAH** (Doriot '57). E.E. 15 in. (Snow Flurry x Welch K 305 pumila.) Standards blue-lavender edges flushed deeper, falls blue-lavender. Spot pattern of brown purple, yellow, lavender, appearing parrot green. Fertile. H.C. '56, H.M. '57\$7.50
- ARCTIC CROWN*** (Tompkins '55.) E. 26 in. (I. hoogiana x Sound Money.) Hybrid yellow amoeana. If its pollen is fertile wouldn't this be great to use on Pinnacle, Golden Alps, and Sun Frost\$3.50

HEMEROCALLIS

(Daylilies)

This popular perennial is gaining friends by leaps and bounds. It blooms from late spring through the heat of summer and many kinds rebloom until frost. "Hems," as they are called, give bloom when there is little else in flower during the heat of summer. They grow into compact clumps and are very disease resistant, and once established withstand lack of moisture quite as well as the bearded iris.

These may be ordered with either Bearded Iris, Dwarfs or the Spurias, and if possible they will be shipped at the same time—if not (due to the stock) will be shipped in September when more mature.

HYBRIDIZING HINTS

This year I shall not devote much space to this section since I have pretty well covered the subject in my 1952, 1956 and 1958 catalogs. I still have available a few copies of these together with 1954 and 1955 issue which may be had for the cost of their printing—50c each. The 1952 and 1956 issues are very limited.

I could give no better advice than to suggest that every new hybridizer of irises join the American Iris Society and the Iris Society of Great Britain for their bulletins and year books are the helps one needs to further his knowledge of modern irises as well as histories of the species and their collectors. It would be well, too, if one were to study the yearly registrations and to mark those which are of particular interest in the color (or colors) he may be working toward, and surely to study the new catalogs and their introductions. Successful crosses must teach us something, but we also learn from our mistakes, and yet, as I have often stated, some "mistakes" turn out well and if we do not give up too soon we may reap unlimited rewards. We modern hybridizers have at our disposal so much material to work with and—a great many of the species, as well as hybrids of all kinds from these. Much pioneering work has been accomplished. Paul Cook has given us the Progenitor lines as well as the closely related "lilliputs", Baria and Green Spot. Geddes Douglas has given us other pumila derivatives and they are very fertile. Walter Welch and others have popularized the dwarfs and their hybrids and among them are dozens of new hybrids with colors hitherto unknown. All these things have unlimited possibilities to the hybridizer, and new genes to unleash.

We have heard of David Hall's new "black" plicatas which started with the cross of Black Hills by Masked Ball. Naturally one could hardly expect the recessive plicata pattern to show in the first generation (F1 seedlings) however, when these were crossed among sister seedlings or selfed and the resulting seedlings again intercrossed and selfed the recessives have been brought out and some startling plicatas are now making their appearance in Mr. Hall's garden. There are Black plicatas, reverse plicatas, some with brown to blackish beards, etc. Only through a line-breeding program could these unusual things be produced, although had the plicata bearers been crossed with other plicatas some interesting plicata seedlings could result.

Mrs. Melba Hamblen of Roy has made some more very wide crosses and among the seedlings there bloomed one that held my interest for it was a cross of a pink and Sable Night. Most of the seedlings of this cross were what one might expect—muddy yellows or dirty blue blends. However, there appeared one pale pink with a slight Smoky (blackish) cast—the beard was an odd shade of smoky apricot due to the tips of the beard being dark. Perhaps if this were selfed or crossed to one of the better yellow sisters, or the blue-blends, it might start a family whereby some blacks with tangerine beards and pinks with black beards could be produced. This line, anyway, could go in many directions and should be useful crossed to the (Helen McGregor x Radiation) x Palomino lines. Perhaps some good blues and violets with tangerine beards will result, or

But I'm sure flags are just blue or white.

something unexpected with mauve, brown or black beards. Further experimentation will bring some excitement to this hybridizer.

Perhaps dozens of other hybridizers have lines started where by new colors and new types will come. The breeder must remember, however, to continue lines for several generations doing the necessary line breeding to bring out these hidden recessives, or to develop new colors that might come from the new genes that could be unleashed by the addition of blood from the species or from very wide crosses which have not previously been attempted. It takes considerable willpower to cross a black and a pink or a blue and a red, however, if a long-range line breeding program should follow some unusual things could result.

Breeders have been interested in various colored beards for quite some years. With the "sea-shell" or "Flamingo pinks" came the tangerine, cerise and pink beards. Many of the modern blacks have black or brown beards and some of the pumila derivatives have violet beards. Some of our avid Aril breeders are employing Lucia to get her beard into the T. B. and dwarf family as well as to fix it in the Onco and Regelia hybrids. Wouldn't a wide beard such as may be found in some of the Oncocyclis hybrids be striking if it were as brilliant as Lucia's, or if they sported beards as colorful as some found in the pinks and their by-products.

Perhaps the use of Progenitor, and its derivatives, will give us better pinks, plicatas, blacks, etc. with white standards. Its wide use and combinations with many colors will be fascinating. We must thank

Paul Cook for his generosity to the world hybridizers with gifts of this exciting parent. Mr. Cook suggested this little intermediate might give quicker results if used in a program for intermediates or border irises such as his own KISS ME KATE. Employed in a Tall-program several generations of careful breeding must follow, yet some interesting side-results might be expected and each hybridizer should watch for both.

Aril Breeding

Interest is growing in Aril breeding and the development of new hybrids from Aril iris (*Oncocyclus* and *Regelias*.) Anyone interested in joining the Aril Society should write to the Treasurer, Mrs. Frances Combs, P. O. Box 84, Whittier, Calif. The 1958 Year Book of the Society was a grand piece of work with many authors making contributions. The 1959 Book promises to be even better. It is hoped successful efforts from all sources will be contributed to the Year Book and perhaps heretofore unpublished records of C. G. White's hybridizing will come to light. Surely no program among the Aril-breds would be complete without the use of some of the sensational new offerings of this great hybridizer, C. G. White. I am pleased to list a few of his hybrids that have done very well for me. They look to hold unlimited breeding possibilities. While it is pure speculation on my part I would hazard a guess that Mr. White made good use of many of the *Regelias* to get better growing qualities in this Aril group and then, perhaps employed the mixture of *Oncocyclus* bloodlines which he had been working with for many long years in his effort to produce the exotic flower of the *Oncocyclus*-types in a perfectly hardy, tall and well branched iris that the average gardener could grow with ease. His goals were, in many respects, reached, for Kalifa Kabul bloomed on 40 inch stalks, being one of the first of the bearded season to bloom and yet one of the very last due to the great number of buds. While lesser branched—having, actually, stalks that approached, in appearance, the *Oncocyclus*, but having more buds were the exquisitely beautiful TATAI PASHA, IMAM AHMID and KALIFA GULNARE. Surprisingly the pollen (when they have pollen) of these is highly fertile—especially on rather difficult things like some of the Wm. Mohr seedlings such as GRAY MOHR, etc.

The blood of *Stolonifera*, I. korolkowi, I hoogiana, Lucia and regelia-derived plants will be useful for great vigor (much increase) and the fertility they will and can bring to breeding of bearded irises, to say little of the possibilities of new colors and forms they may contribute.

Enough speculation. I leave you to tweezers and pollen and may abandon, speculation, imagination, chance (or study) being the iris world (and you) spectacular results.

On Markers

Each year breeders and fanciers write for advice about the best kind of marker or marking device to

use. We have found the TRI-CHEM PEN (obtainable at almost all office supply houses) a superior marker for printing or writing names or numbers on wood or metal. The Tri-Chem-Pen comes in tubes and writes by means of a ball-point tip. The tube should not be pressed too firmly and by all means must be protected from punctures of any kind and should never be left on the ground where one might accidentally step on it. If you cannot buy the pen in your area it might be had from Norman and Elsie Purviance who also make a really fine and sturdy garden marker. Their address is: See-Fine Markers, 1817 Twelfth Ave., Lewiston, Idaho.

For those who use temporary wood markers the nationally advertised "MARKS A LOT" (felt tip marker) is fine, but does not hold really well on metal. Black is best both in this and the Tri-Chem-Pen, yet those with artistic temperments might wish to use various colors.

We have found the O. K. Rose Marker quite satisfactory too, and these may be had from The Everlasting Label Company, Paw Paw, Mich.

For those who have time, painted stakes are very satisfactory. If one charts his garden such stakes may be removed after the blooming season and stored thus giving them longer life. India-Ink may be used to mark plain wood stakes for temporary use.

Controls for Rot

Various kinds of rot plague bearded irises. These might be controlled with a host of materials available today. The subject is well covered in the new book GARDEN IRISES, published by the American Iris Society, and I recommend every fancier to add this book to his library for it is the most comprehensive book of its kind ever published in this country, obtainable at A.I.S. headquarters, \$7.95.

I shall mention precautionary treatments and curative measures which might help some fanciers. If Botrytis is bothersome in your area you may find a good dusting of Captan or some other fungicide useful with each new rhizome to be planted. If Botrytis continues, the use of Agricultural Teramiacine may be helpful. Soils that are heavy may be particularly bothersome. If one is able to obtain very fine sand (preferably blow-sand—that is sand that is fine enough that wind will blow and shift it about) this may be put into the hole where each rhizome is planted to insure drainage as well, perhaps, giving the plant a lighter soil and "chance to breathe," which might discourage Botrytis. In event sand is not obtainable wood ashes or crushed coal ashes used sparingly could help.

For soft rhizome rot (usually caused by moisture and heat in the summer) the late R. L. Lyell of Kansas scraped away all soft and affected portions of leaves and rhizomes and dusted the parts with powdered plaster of paris and left the parts exposed to the air and sun. The plaster will harden and "heal" the "wound."

TERMS OF SALE

DISCOUNTS and extras. To show our appreciation for your orders we offer the following discounts: Orders over \$25.00 select 1/4th more in free iris from the catalog. Orders over \$50.00 select 1/3rd more in free iris. Then list a few you would like to grow and from this list we can select EXTRAS, for we like to be generous. It might be wise, also, to list a few alternates in event some variety may be sold out. Let us know if you do not want substitution, however, and in that event we will refund.

We are proud of our reputation for generosity. We do not make sensational discounts and collection offers. This all takes time and space in the catalog. We would rather have you list the varieties you do not have and might enjoy from which we can choose the extras for your order.

SHIPPING DATES. We ship from first of July to end of September, although if weather permits, and we are able to dig, later shipments may be made. However, unless you live in a climate suitable to late planting this is not advisable unless you are prepared to give adequate winter mulch.

Please do not write instructions or personal letters on the order sheet. Be sure your order is all on one page or if, of necessity, you must make the order on more than one page clip these together and have your address plainly written on each order.

CASH WITH ORDERS, PLEASE, UNLESS YOU HAVE AN ACCOUNT WITH US. POSTAGE RATES HAVE RAISED AND WE ARE OBLIGED TO ASK 50c ON ALL ORDERS UNDER \$10.00.

DEALERS PLEASE NOTE: We do not issue a wholesale catalog. Commercial growers desiring quotations on quantities kindly send us your list of wants together with evidence of your commercial status.

GUARANTEE. We guarantee all varieties to be true to label and to be normal rhizomes for the variety. We also guarantee live delivery and satisfaction. Please notify us at once of any discrepancy in your orders, or if you are not completely satisfied. We will replace any variety lost over the winter if such loss is listed together with a new order. In event we have discontinued the variety you may select the value in something we do list.

POSTAGE OFFER: As you know postal rates have continued to climb. If you wish to include \$1.00 extra for postage in your order you may select \$2.00 worth of plants of your own choosing.

JOIN THE AMERICAN IRIS SOCIETY AND THE IRIS SOCIETY OF GREAT BRITAIN

Membership in these societies is imperative if one is to be fully informed on iris matters. Four quarterly bulletins from the American Iris Society and the annual Year Book of the Iris Society of Great Britain are full of informative articles, pictures and the new regulations.

American Iris Society Memberships: 1 year, \$5.00; Family (husband and wife), \$6.00; Triennial (3 years), \$12.50; Triennial—Family, \$15.00; Sustaining, \$10.00; Research, \$25.00, and Life, \$100.00.

The new Secretary is Clifford W. Benson. Office: 2237 Tower Grove Blvd., St. Louis 10, Mo.

If you wish to have me forward your memberships to either society please make these out to: American Iris Society. Membership in the Iris Society of Great Britain is \$3.00 annually.

I will give to any new members, to either society, a fine seedling for breeding purposes in any color you may desire, but please give several choices in event I do not have your first choice. I have a host of Pink and Orange crosses and many of these will be too good to discard and may help you in your hybridizing program. I also have many interesting 3/4ths Tall (1/4th pumila) seedlings if these are of interest.

JOIN THE AMERICAN HEMEROCALLIS SOCIETY

Dues \$3.50 annually. Publish three Journals and a magnificent Yearbook.

Secretary, Mrs. Olive Hindman, 404 Weigle Ave., Sebring, Fla.

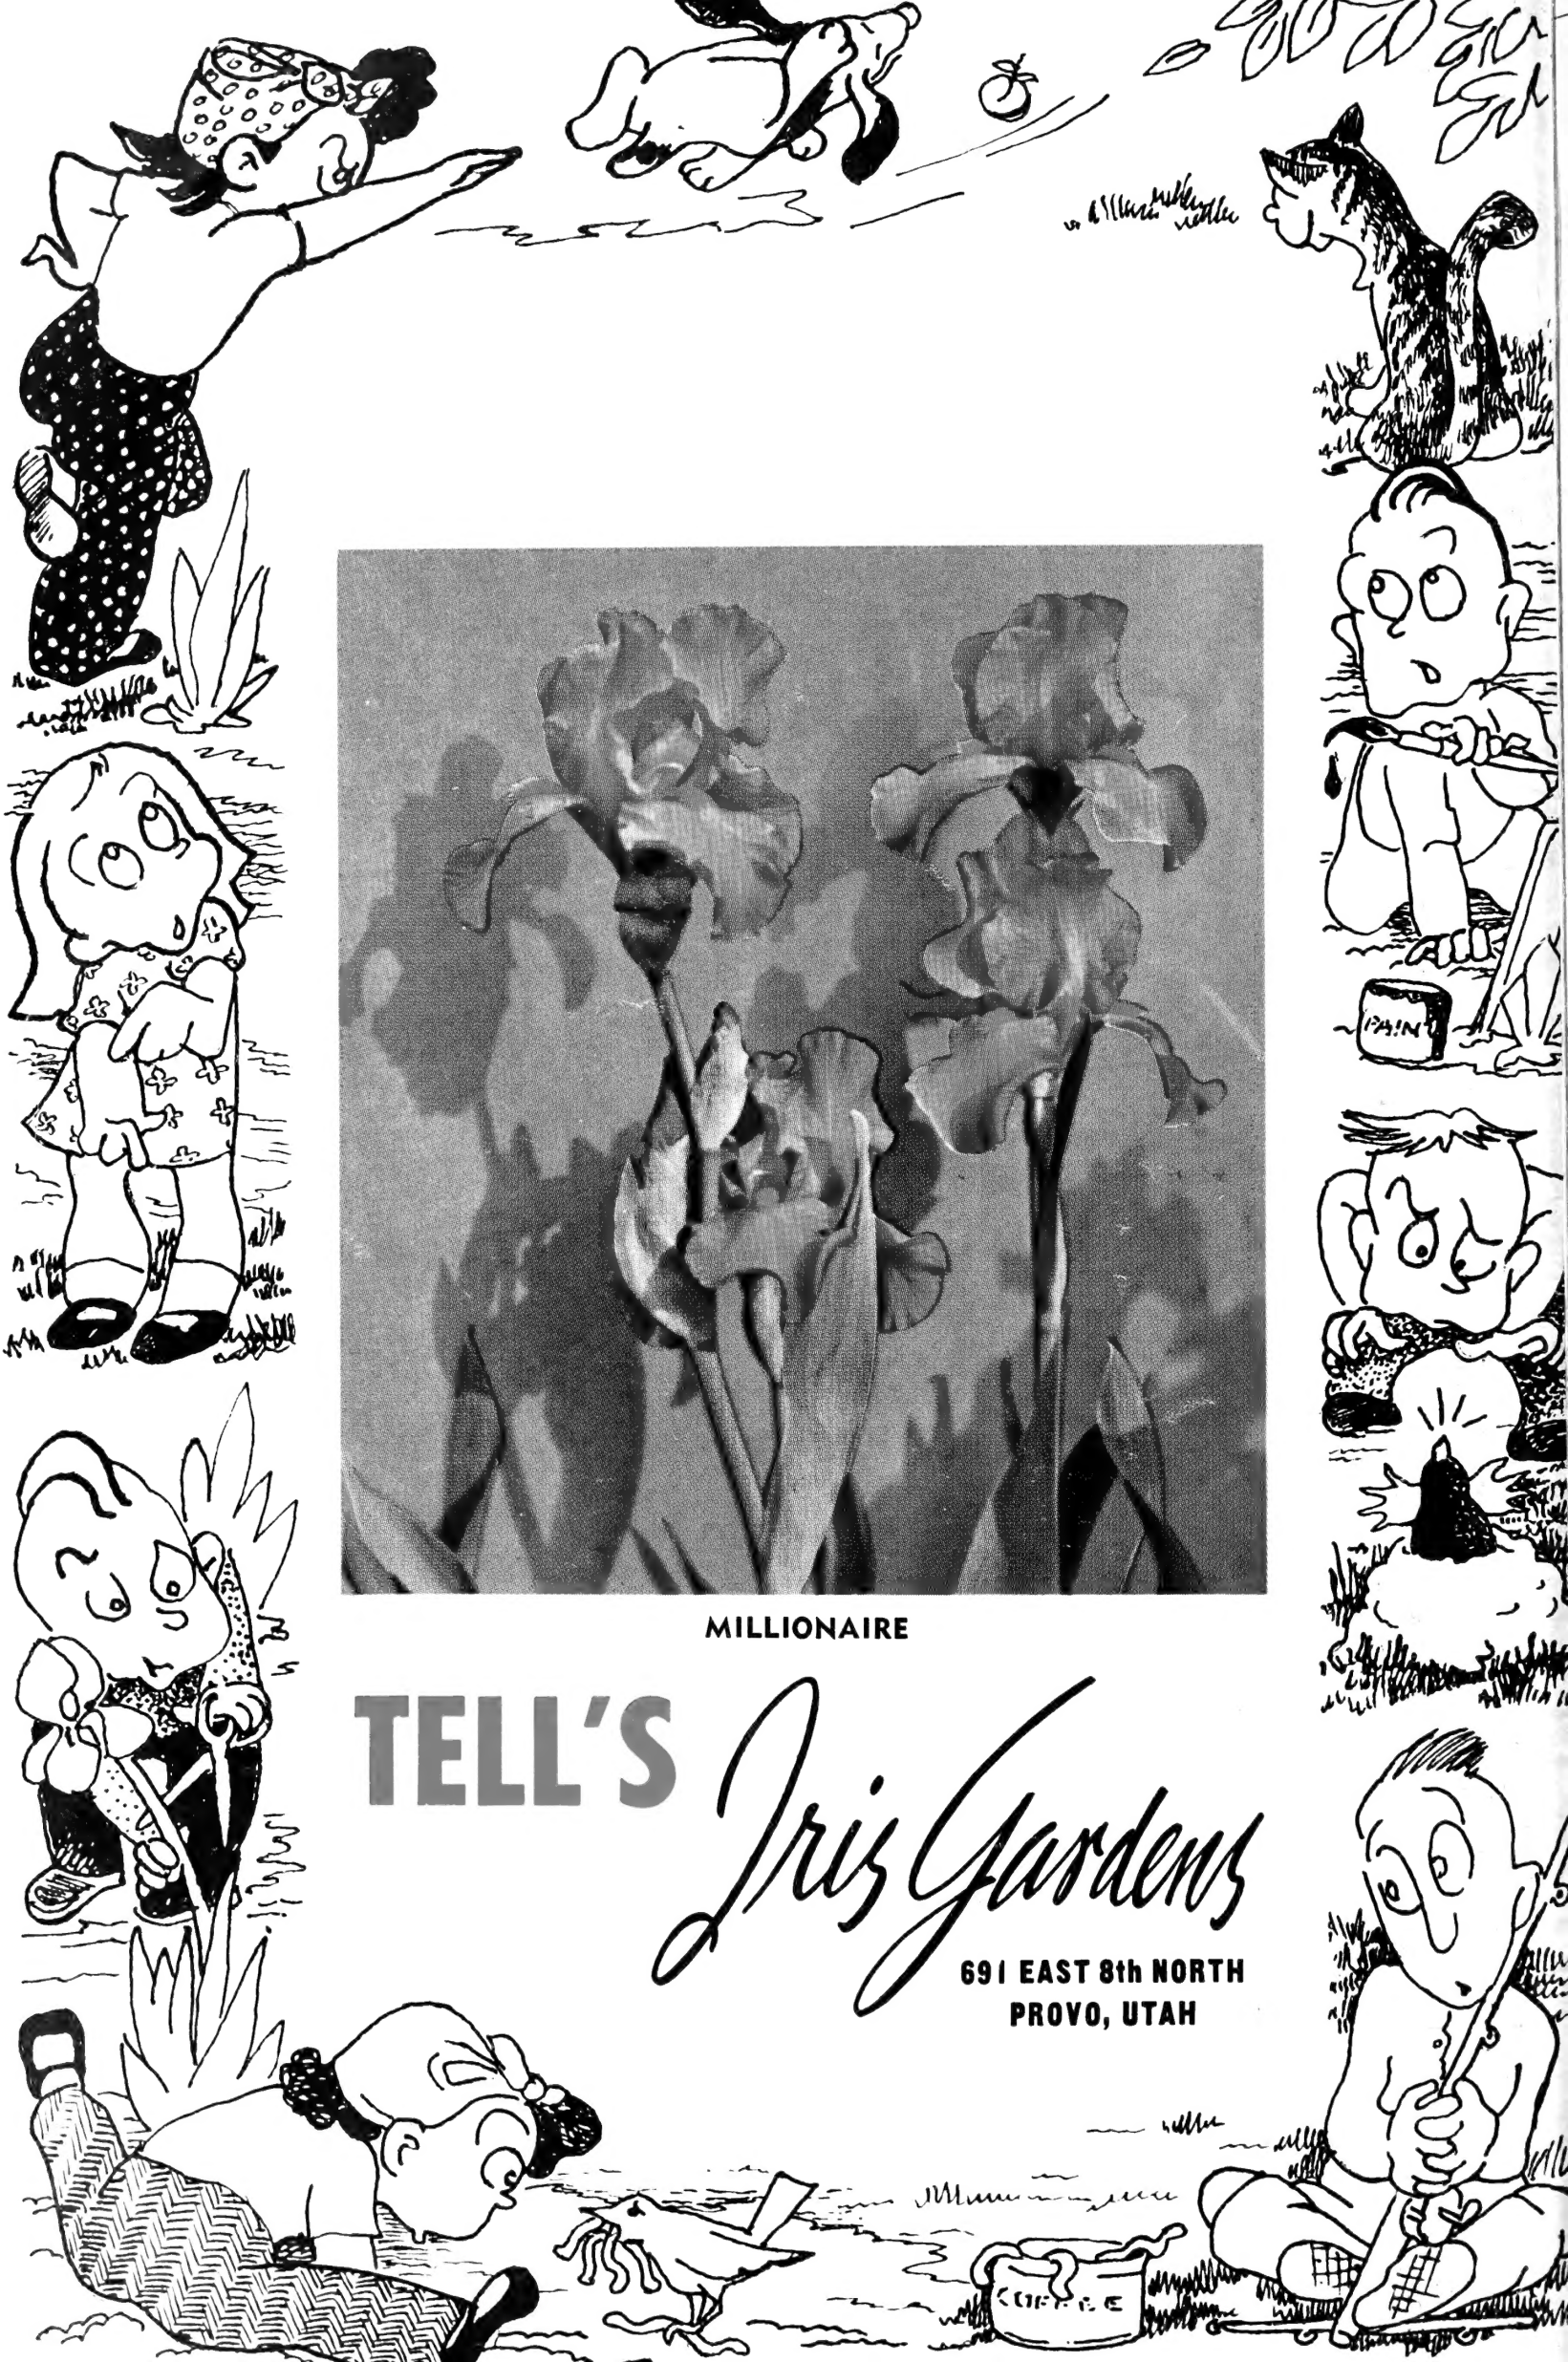

Our new fields are located on the right side of the road just east of the VINEYARD Ward Chapel (Church), although our address remains in Provo and we maintain some iris and daylilies at the home garden.

Old issues of our catalog still available in limited supply: 1952, 1956, 1958 with hybridizing sections; 1954, 1955, 1957. 50c each.

We do not maintain a private mailing list, but send our catalog to all A.I.S. members and those who send 50c and a request for the catalog. We wish to thank those who do not order but send along money for the catalog, anyway, expressing appreciation for the catalog.
